# *The Universal Clamp System*

Your new connection to the spine.

Not your average spinal implant, Zimmer Spine's newly introduced *Universal Clamp* spinal fixation system is the output of a research and design project aimed at developing an implant with the benefits of screws, the adaptability of hooks and the simplicity of wire instrumentation which optimizes the strength of the implant/bone interface. Providing the freedom to compress, distract, derotate and translate using a pedicle sparing approach, the *Universal Clamp* system provides a new solution for your connection to the spine. From the people of Zimmer Spine.

Zimmer Spine Satellite Dinner Event

# Universal Clamp System Experience

Thursday, November 12, 2009 - 6:30 pm

Town Hall

342 Howard St

San Francisco, CA

RSVP: [www.zimmerpine.com](http://www.zimmerpine.com)

Explore how the *Universal Clamp* system can be used in a variety of complex spinal pathologies.

## Universal Clamp System features include:

- **Adaptability** – The *Universal Clamp* system was designed to be adaptable to a variety of spinal pathologies.
- **Simplicity** – The *Universal Clamp* system utilizes minimal instrumentation, reducing clutter in the surgical field and improving surgical flow. Reduction, arcing translation, compression and distraction maneuvers are intuitive and can be serially performed by successive tightening of clamps in the construct to obtain a smooth, controlled correction of spinal pathology.
- **Compatibility** – The *Universal Clamp* system’s polyester band is biologically compatible and interfaces with Zimmer Spine’s pedicle screw systems.

*Note: This is a satellite event. It is strictly a promotional event and is not approved for CME credit.*
