SURGEON EDUCATION

Overview

Zimmer Spine is at the forefront of spinal surgery. Our innovative products and comprehensive training enable surgeons to offer complete solutions to a growing number of patients.

Objectives

Upon completion of this training course, surgeons will be able to:

- Assemble fixation constructs extending from the occiput to the upper thoracic spine
- Determine proper plate and screw positioning for occipital fixation
- Appropriately target pedicles for screw fixation in the upper thoracic spine
- Effectively transition a construct across the cervical thoracic junction.

Agenda

- Minit® and NexLink® System overview
- Surgical technique discussion
- Indications for posterior fixation
- Cadaveric hands-on lab

Online Registration

Registration, as well as travel and hotel arrangements, can be made online at www.zimmerspine.com.

Note: This course is not CME Accredited.
